preface in planning the present work the aim of the authors has been to provide a manual embodying a course of study adapted to the requirements of the student chiefly in higher classes of schools and to some extent in junior classes of universities to make this within the necessarily narrow limits of space imposed anything more than a bare synopsis it has been necessary to restrict the extent of the ground covered this has been done 1 by leaving out altogether certain classes of existing animals 2 by omitting all descriptions of extinct groups 3 by dealing only very briefly with embryology opinions must differ as to the best selection of groups for an elementary manual of this kind but broadly there can it has appeared to us be little doubt that what should be omitted or only briefly dealt with are the groups of rare occurrence and uncertain relationships the greater part of the space being devoted to the more familiar representatives of the large phyla a course of laboratory and museum instruction supplemented by work in the field and on the seashore is absolutely necessary in order that any sound knowledge of zoology may be attained the present manual does not provide such instruction but is intended to be used in association with it and the examples selected for description are such as may under most circumstances be readily obtained the general plan is similar to that followed in the text book of zoology by the same authors but the restricted space has necessitated considerable modifications we have not adopted the method followed in various recent manuals of beginning with one of the larger invertebrata or with a vertebrate and working from that upwards and downwards the reasons given for such a mode of treatment we understand to be that if we begin with the simplest animals the protozoa we discourage and embarrass the beginner by introducing him at once into a world entirely new to him requiring him at the same time to learn the use of an entirely unfamiliar instrument the microscope but in our opinion the difficulty is much less than is alleged by the advocates of the alternative method and the advantage of presenting the facts at the outset in a natural and logical order by far outweigh any such disadvantages we are convinced that any general acquaintance which the student may possess beforehand with a rabbit or a crayfish will be of little real value to him when he begins to take up seriously the study of its structure moreover an elementary knowledge of the use of the microscope is absolutely essential to any adequate study of zoology as an intellectual discipline and this difficulty such as it is may as well be met first as last owing to the lamented death of professor t jeffrey parker at a time when but little progress had been made with this work his actual share in it has been but slight but as it was planned between us and the earlier parts had the advantage of his revision and more especially as it owes a great deal to his work in the text book it has been thought

right to let it appear under our joint names as originally intended i have to express very great indebtedness to professor w newton parker for the pains he has taken in revising the proof sheets and for many valuable suggestions which he has made during the progress of the work william a haskell

excerpt from a manual of zoology the favor with which the first and second american editions of hertwig s zoology have been received has led to a thorough revision of the whole with a close comparison with the latest german edition in this there have been introduced many new features bringing the work up to date these include a discussion of mendelian inheritance many modifications in the account of the theory of evolution and a considerable enlargement of the protozoa and especially of the pathogenic forms making the volume of more value to the student of medicine to have included these without changes elsewhere would have resulted in a much larger volume but the demand in american colleges has been for a smaller work and so a reduction has been made in two ways there has been a condensation by the elimination of unnecessary words and phrases and by the omission of considerable matter of minor importance then there has been the recognition of the fact that the book has two uses one in the class room the other as a reference work the two classes of matter have been distinguished by difference of type no attempt has been made to bring the systematic names into accord with the latest vagaries of the systematists no useful and could be served by changing or transferring the well known names of echidna coluber amia homarus unio holothuria am ba etc while the confusion this would introduce would be enormous it should be understood that while the revision is based

upon the german edition of professor hertwig he should not be held responsible for any changes introduced the whole responsibility for these rests upon the american reviser
